How to Fix QuickBooks Error H202?

QuickBooks error H202 is an error that pops up when a user tries to use QuickBooks in multi-user mode. This error implies that the multi-user connection to the server is blocked.

Methods to Fix Error

SOLUTION 1

Check Network Connectivity

First of all, the user will have to generate a Replacement Folder on the hosting computer.

SOLUTION 3

Use the QB File Doctor Tool

Run QuickBooks File Doctor Tool to solve any issue in the network.

SOLUTION 5

Get the QB server information attached the Windows Host File

To begin the procedure, one must know the fact that the windows host file is located in the drivers folder..

SOLUTION 7

Configure QuickBooks Database Server Manager

On the keyboard, the user will have to press Windows + R keys and type msc.

SOLUTION 2

Ensure that QB services are running

To check QBDBXX services are running or not, carry out the forthcoming steps; repeat these steps for the QBCFMonitorService

SOLUTION 4

Testing and Calibration of Network Connection

First of all, open the QB for all computer networks for using this accounting software

SOLUTION 6

Alter the location of your Company File

The next best solution to terminate error H202 from your system is to change the location of the Company File on your system.
